

Combating Fatigue

for Ramp Service Employees

Team Blue | Final Presentation

A day on the job

John, tirelessly unloads 150 bags from a Boeing 737 flight

...and receives a notification for his next assignment to unload another 130 bags

Impacts

As John continues his demanding tasks his reaction time and focus are impaired

...which leads to him tripping and sustaining a leg injury

Impact on Employees

IDX 548-01 | Innovation Methods | Janhavi Singh, Sanya Shah, Snehal Khatavkar, Steven Hunsicker

Annually, around 243,000 people globally are injured in ground operations incidents.

Impact on Organizations

Ramp accidents cost major airlines worldwide at least US\$10 billion a year.

Insights

Fatigue is Complex

Fatigue is **multifaceted**, and elusive, originating from various sources and capable of manifesting in numerous ways.

U-ROC is About Efficiency

The current scheduling system **leans** heavily towards operational efficiency while sacrificing some focus on the teaming, culture and employee-centric aspects of the job.

De Facto vs. De Jure

This tension is evident in perceived job stress, highlighting the delicate balance between organizational goals and the trade-off employees often feel like they need to make between safety and efficiency.

Purpose

We aim to empower both United Airlines and its employees to proactively address fatigue, striking a balance between employee well-being and operations safety. Our approach encompasses a holistic strategy, targeting fatigue from both a top-down and on-the-ground perspective.

So, how can we tackle fatigue?

Should we just...

Teach the ins, outs, do's and don't of fatigue?

Yes, but...

Humans can be unreliable and have been known to tell the occasional lie.

So could we...

Find ways to encourage proactive behavior and build a heightened awareness of fatigue?

Yes, but... How do we know if it's working?

How about we...

Capture more quantitative data through high-tech sensors? After all, it's 2023.

Yes, but... What can we do with all this data?

Can we...

Optimize for fatigue reduction and avoidance in our scheduling system?

Yes but...

How would that work without positive reinforcement through holistic training and education?

Performance efficiency and Safety

Optimized Operations

Tracking, Monitoring and Measuring

Education & Awareness

Design principle/Strategy

Foster shared responsibility for fatigue management by empowering employees

Proposed Solutions

Ergo-Track Training

Education & recommendation

Performance Efficiency and Safety

Design principle/Strategy

Encourage safety actions on the job through Environmental Cues and Robust Communication Support

Proposed Solutions

Tracking, Monitoring and Measuring

Design Principle

Integrate devices and captured data seamlessly into existing systems to cultivate a personalized understanding of fatigue and establish a continuous feedback loop

Proposed Solutions

Active Tracking Measures for Self Reporting

Passive Tracking
Leveraging Wearables

Optimized Operations

Design principle/Strategy

Integrate a comprehensive range of fatigue-related data for operational decisions

Proposed Solutions

Fatigue Management Dashboard

IDX 548-01 | Innovation Methods | Janhavi Singh, Sanya Shah, Snehal Khatavkar, Steven Hunsicker

Adaptive Workforce Scheduling

Solutions

Performance Efficiency & Safety **Safety Prompts**

Ramp service employees

OVERVIEW

A set of reminders and alerts delivered through human interaction and technology touch points to influence safety behaviors in employees. The nudges aim to reinforce positive safety behaviors and establish a shared responsibility towards safety.

BENEFITS AND IMPACT

Personalized Reminders Reminders Aligned for Task-Specific Safety Foster a safe working environment by recognizing each other safety actions

PACE CHECK

737 at gate 4

Take a moment to assess your pace while lifting bags.

Your well-being matters!

Tracking, Monitoring and Measuring Gamified Measurement & Tracking

Ramp service employees

OVERVIEW

The solution is a gamified daily check-in system designed to assess the fatigue levels and attitudes of ramp employees in the airline industry. This solution not only addresses the need for monitoring employee fatigue but also emphasizes a user-friendly and non-intrusive approach to data collection, ensuring accurate and meaningful insights.

BENEFITS AND IMPACT

For Employees

Non-intrusive way to capture attitude and alertness Minimal cognitive load with abstracted questions

For Organization

Real-time data collection Early detection of potential fatigue issues Enables proactive intervention to prevent accidents or injuries

Tracking, Monitoring and Measuring Wearables For Biometric Fatigue Data

Ramp service employees

OVERVIEW

Wearable biometric trackers represent an innovative step forward in managing employee health and fatigue. These devices will continuously monitor vital statistics, providing data that can be analyzed to predict and prevent fatiguerelated incidents. By integrating seamlessly with United's operational systems, these wearables offer a real-time solution to enhance employee wellness and safety.

BENEFITS AND IMPACT

For Employees

Collected data would enable the provision of hyperpersonalized recommendations and wellness insights.

For Organization

Real-time data collection Early detection of potential issues

Education and Awareness

Ramp service employees

OVERVIEW

Ergo-Track Vision is a cutting-edge, AI-powered motion analysis solution designed to enhance ramp employee safety by identifying and mitigating ergonomic risks in realtime. It translates complex biomechanical data into actionable insights, aiming to reduce fatigue-related injuries and optimize task allocation.

BENEFITS AND IMPACT

Injury Prevention Improved Performance Reinforces best practices

Optimized Operations

Fatigue Management Dashboard

Team supervisors

Operations team

Ramp service employees

OVERVIEW

Harnessing real-time fatigue data and predictive analytics, this dynamic dashboard delivers **actionable** insights into **causes** of fatigue and **intensity** of fatigue across various employee groups at United facilities. By integrating safety as a core parameter, the dashboard empowers **proactive decision-making** to optimize workforce performance, safeguard operational integrity, and foster a safety-conscious culture within the organization.

BENEFITS AND IMPACT

- Fatigue Heat Maps for Targeted Interventions
- Data-Driven Advocacy for Safety Investments
- Strategic Workforce Optimization
- Incident Correlation and Root Cause Analysis

Optimized Operations

Adaptive Workforce Scheduling

Team supervisors

Operations team

OVERVIEW

The proposed adaptive workforce system leverages predictive analytics to allocate tasks based on task risk and employee fatigue, ensuring a balanced schedule. The system incorporates measures tailored to varying risk levels, offering a dynamic approach to workforce management. This comprehensive solution evaluates and suggests roster formations for a better workflow and safer environment.

BENEFITS AND IMPACT

For Organization

Proactive Fatigue Management Dynamic Risk Management Scalability

For Employees

Balanced and equitable scheduling

Education and Awareness

Employee Education & Recommendation

Ramp service employees

OVERVIEW

Our tailored solution empowers employees to understand their fatigue patterns, enabling informed decisions for proactive well-being management. Through personalized recommendations aligned with individual schedules, it fosters heightened awareness and engagement.

BENEFITS AND IMPACT

Proactive Well-being Management Hyper-Personalized Recommendations Diverse Task Preparedness Holistic Health Awareness

IDX 548-01 | Innovation Methods | Janhavi Singh, Sanya Shah, Snehal Khatavkar, Steven Hunsicker

Fatigue Risk Management Approach

Risk Management Principles

- Minimize fatigue factors for enhanced risk management
- Mitigate fatigue's impact on outcomes
- Empower employees through coping education
- Prioritize safety by reducing perceived job stress
- Cultivate a unified understanding and culture of fatigue
- Distribute safety responsibilities to both leadership and employees

Strategic Roadmap

Wave 1 | Now **Building Capabilities**

Wave 2 | Soon **Gaining Momentum**

- Implement pilot programs and MVPs
- Harness existing data to identify patterns
- Develop predictive models

- Initiate the connection of initial systems
- Begin collecting of new data
- Optimize predictive models for enhanced
- accuracy and efficiency

Performance **Efficiency &** Safety **Optimized Operations**

Thank you!
